Education

Indian Institute of Information Technology (IIIT), Sri City *2021 - 2025*
- Bachelor of Technology in Computer Science and Engineering **CGPA: 9.17**

Professional Experience

Meesho, Bangalore, India **June 2025 - Present**

Software Engineer I (SWE-I), DevOps Platform – Promoted from Intern *December 2025 - Present*

- Built a full-stack **Internal Developer Platform** (Go, React) that turns day-to-day DevOps operations into self-service workflows for **800+ services**, used daily by engineering teams across every business unit at Meesho.
- Engineered an internal **DevOps operations platform** (Go, MongoDB, Redis queues) that automates on-call rosters, SLA tracking and leave-aware round-robin assignment for **350+ tickets/week**, integrating Jira, Slack and PagerDuty.
- Added **LLM-powered** features to internal tools to summarize tickets, draft incident reports and generate weekly team digests and reflection insights, saving engineers hours of manual reporting every week.
- Scaled and extended the **CI/CD and deployment platform** powering **1,400+ deployables**, adding multi-zone deployments, canary releases, auto-rollbacks and release-safety controls, making releases safer for every team.
- Drove platform changes for **6 Kubernetes cluster migrations** and zone expansions with **zero downtime**, and streamlined capacity planning and scaling operations across all production clusters at Meesho.
- Created **observability and incident-response** tooling using Prometheus, Grafana and PagerDuty APIs, giving developers and on-call engineers faster visibility into service health, alerts and deployment status.
- Enabled **monorepo support for Node.js** services org-wide, so teams build and deploy many services from one repo.
- Shipped incident **RCA reporting** with analytics dashboards and APIs, helping teams track incident trends.
- Co-leading the shift from business-unit-based shared clusters to a **cell-based architecture**, designing live migration of services and their full dependency chains into isolated cells with zero dropped requests to limit blast radius.

Software Development Engineer Intern *June 2025 - December 2025*

- Delivered frontend and backend workflows for internal DevOps platform tools used by engineering teams, and automated repetitive infrastructure and CI/CD tasks using Kubernetes, ArgoCD, Helm and Jenkins pipelines.

Irage Broking Services LLP, Mumbai, India **December 2024 - June 2025**

Software Development Engineer Intern

- Designed and implemented backend services in **Go** for **Arrow**, iRage's **ultra-low-latency** trading platform (**99% of orders executed under 4 ms**), focusing on performance and reliability of critical order workflows.

Quest Global Engineering Services Private Limited, Bangalore, India **June 2024 - July 2024**

Intern, Data Visualization

- Developed data visualization tools and interactive dashboards to explore and present complex data relationships.

Projects

Vihari - Travel Booking Platform | *MongoDB, Express, React, Node.js* | GitHub | Live *December 2023 - May 2024*

- Engineered a full-stack **MERN** bus and tour booking platform with **60+ REST APIs**, seat-level reservations (seater/sleeper layouts), server-side pricing and **Razorpay** payments with signature verification.
- Designed **3 role-based portals** with **JWT** and **RBAC**, a **conversational booking assistant** and emailed PDF e-tickets; shipped via **CI/CD** to Vercel and Render with **MongoDB Atlas**, **Redis** and Cloudinary.

Learnify | *MongoDB, Express, Node.js, AWS S3* | GitHub | Live *April 2024 - June 2024*

- Developed a Node.js, Express, MongoDB and EJS learning platform with OAuth 2.0, RBAC, creator video uploads, student access rules and protected content delivery for paid courses and creator-uploaded video content.
- Implemented hierarchical threaded comments and AWS S3/CDN media delivery with pre-signed direct uploads, improving performance and security while reducing load on the backend application servers during heavy uploads.

Technical Skills

- **Languages & Frameworks:** Go, C++, C, JavaScript, TypeScript, Python, SQL, React.js, Node.js, Express.js
- **Backend & Data:** REST APIs, gRPC, Temporal, Microservices, MySQL, PostgreSQL, MongoDB, Redis
- **Platform & DevOps:** Kubernetes, Docker, ArgoCD, Helm, Terraform, Jenkins, GCP, Prometheus, Grafana
- **Tools & Others:** Linux, Git, GitHub, Postman, Cursor, Claude Code, Unit Testing, Integration Testing
- **Profiles: LeetCode | GeeksforGeeks**
